

Lab Assignment 14.3

Name: R.Sanjay
Roll No:2303A54001
Batch -47A

SCHOOL OF COMPUTER SCIENCE AND ARTIFICIAL INTELLIGENCE		DEPARTMENT OF COMPUTER SCIENCE ENGINEERING	
Program Name: B. Tech		Assignment Type: Lab	
Course Coordinator Name		Dr. Rishabh Mittal	
Instructor(s) Name		Mr. S Naresh Kumar Ms. B. Swathi Dr. Sasanko Shekhar Gantayat Mr. Md Sallauddin Dr. Mathivanan Mr. Y Srikanth Ms. N Shilpa Dr. Rishabh Mittal (Coordinator) Dr. R. Prashant Kumar Mr. Ankushavali MD Mr. B Viswanath Ms. Sujitha Reddy Ms. A. Anitha Ms. M.Madhuri Ms. Katherashala Swetha Ms. Velpula sumalatha Mr. Bingi Raju	
CourseCode	23CS002PC304	Course Title	AI Assisted Coding
Year/Sem	III/II	Regulation	R23
Date and Day of Assignment	Week7 – Wednesday	Time(s)	23CSBTB01 To 23CSBTB52
Duration	2 Hours	Applicable to Batches	All batches
Assignment Number: 14.3(Present assignment number)/ 24 (Total number of assignments)			
Q.No.	Question		Expected Time to complete

	<p>Lab 14: Web Design Applications Using AI Assistance HTML, CSS, and JavaScript Generation with GitHub Copilot</p> <p>Lab Objectives</p> <p>The objectives of this laboratory exercise are to:</p> <ul style="list-style-type: none"> • Design functional and visually appealing web applications using HTML, CSS, and JavaScript. • Use AI-assisted tools to accelerate front-end development. • Apply responsive, accessible, and interactive web design principles. • Customize and validate AI-generated UI code for real-world applications. 	
	<p>Learning Outcomes</p> <p>After completing this lab, students will be able to:</p> <ul style="list-style-type: none"> • Generate structured HTML layouts using AI assistance. • Apply responsive CSS techniques such as Flexbox and Grid. • Implement interactive client-side features using JavaScript. • Critically review and improve AI-generated front-end code. 	
	<p>Tools Required</p> <ul style="list-style-type: none"> • Visual Studio Code (VS Code) • GitHub Copilot Extension • Web Browser (Chrome / Firefox) • HTML5, CSS3, JavaScript (ES6) 	
1	<p>Task 1: AI-Assisted Personal Portfolio Website</p> <p>Scenario</p> <p>A student wants to showcase academic projects, technical skills, and contact information through a personal portfolio website. AI tools are used to speed up development while maintaining quality and customization.</p> <p>Tasks</p> <ol style="list-style-type: none"> 1. Use GitHub Copilot to generate a semantic HTML structure with sections: <ul style="list-style-type: none"> ○ Home ○ About ○ Projects ○ Contact 2. Ask Copilot to suggest responsive CSS using Flexbox or Grid. 3. Customize AI-generated CSS to add: <ul style="list-style-type: none"> ○ Hover effects on project cards ○ Smooth scrolling navigation <p>Expected Outcome</p> <ul style="list-style-type: none"> • Clean and well-structured portfolio website • Responsive layout for desktop and mobile screens • Interactive project cards <p>Prompt:</p> <p>Generate a semantic HTML portfolio website with Home, About, Projects, and Contact sections and responsive CSS using Flexbox/Grid. Add smooth scrolling navigation and hover effects on project cards. Provide index.html and style.css.</p> <p>Code:</p>	Week 7 Wednesday

Output:**About Me****Explanation:**

Using GitHub Copilot, a clean and semantic portfolio website was generated quickly with proper sections like Home, About, Projects, and Contact. The AI also suggested responsive CSS using Flexbox/Grid, making the website work well on both desktop and mobile screens. After customization, hover effects on project cards and smooth scrolling navigation improved the website's interactivity and user experience.

Task 2: AI-Generated Restaurant Landing Page**Scenario**

A local restaurant requires a simple yet attractive landing page to display its offerings. The developer uses AI assistance to rapidly generate UI components.

Tasks

1. Use Copilot to create a navigation bar with links:
 - o Home
 - o Menu
 - o Gallery
 - o Contact
2. Generate a menu section styled with CSS cards.
3. Implement a JavaScript-based image slider for the gallery using Copilot suggestions.
4. Customize animations or transitions for better user experience.

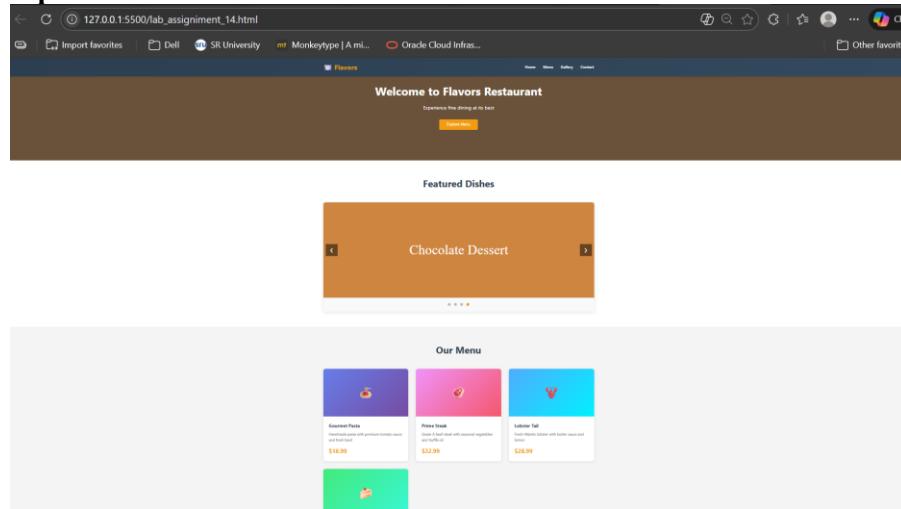

Expected Outcome

- Fully functional restaurant landing page
- Responsive navigation bar
- Working image slider with smooth transitions

Prompt:

Generate a responsive restaurant landing page with navigation bar (Home, Menu, Gallery, Contact), menu cards using CSS, and a JavaScript image slider with smooth transitions. Provide index.html, style.css, and script.js.

Code:

Output:**Explanation:**

Using GitHub Copilot, a responsive restaurant landing page was generated efficiently with a navigation bar, menu cards, and gallery section. The AI also suggested a JavaScript image slider with smooth transitions, improving visual presentation and user interaction. After customization, animations and hover effects enhanced the overall user experience and made the page more attractive and professional.

Task 3: AI-Powered Event Registration Form**Scenario**

SR University is hosting a technical fest and requires an online registration form with real-time validation to ensure accurate user input.

Tasks

1. Ask Copilot to generate an HTML form with the following fields:
 - Name
 - Email
 - Phone Number
 - Department
 - Event Selection
2. Use AI assistance to style the form using CSS for readability and accessibility.
3. Implement JavaScript validation using Copilot:
 - Email format validation
 - Phone number length validation
 - Required field checks

Expected Outcome

- User-friendly and visually appealing form
- Real-time validation messages
- Prevention of invalid submissions

	<p>Prompt: Generate an event registration form using HTML, CSS, and JavaScript with fields Name, Email, Phone, Department, and Event Selection. Add responsive styling and real-time validation for email format, phone number length, and required fields. Provide index.html, style.css, and script.js.</p> <p>Code:</p>	
--	--	--

Output:

The screenshot shows a web browser window with the URL 127.0.0.1:5500/lab_assignment_14.html. The page title is "Event Registration". The form contains the following fields:

- Name *: A text input field with placeholder "Enter your full name".
- Email *: A text input field with placeholder "Enter your email address".
- Phone Number *: A text input field with placeholder "Enter your phone number (10 digits)".
- Department *: A dropdown menu with placeholder "Select a department".
- Event Selection *: A dropdown menu with placeholder "Choose an event".

At the bottom of the form are two buttons: "Register" (blue) and "Clear" (grey).

Explanation:

Using GitHub Copilot, a structured and visually appealing event registration form was generated quickly with proper input fields and styling. JavaScript validation was implemented to check email format, phone number length, and required fields in real time. This helped prevent invalid submissions and improved the accuracy and user experience of the registration process.

Task 4: AI-Assisted E-Commerce Product Page**Scenario**

A startup is developing a basic e-commerce product page to showcase products and manage simple cart functionality.

Tasks

1. Use Copilot to generate a grid-based product catalog using HTML and CSS.
2. Implement an "Add to Cart" feature using JavaScript.
3. Modify AI-generated code to include:
 - o Cart item counter at the top-right corner
 - o Visual feedback when a product is added

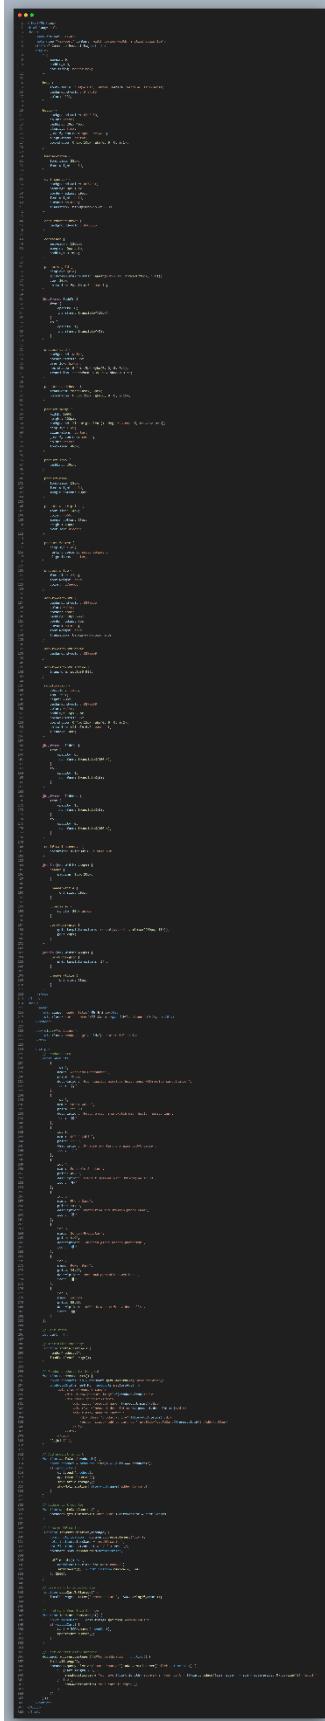

Expected Outcome

- Functional product catalog
- Working cart counter
- Interactive user experience

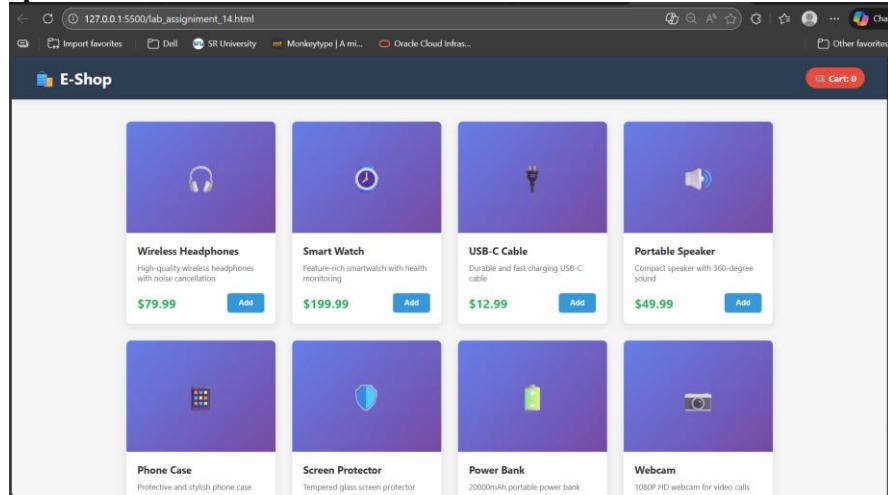

Prompt:

Generate an e-commerce product page with products displayed in a responsive grid using HTML and CSS, and implement an "Add to Cart" feature using JavaScript. Include a cart counter at top-right and visual feedback when adding items. Provide index.html, style.css, and script.js.

Code:

A screenshot of a terminal window displaying a massive amount of text, likely a stack trace or a very long log file. The text is mostly black on a dark background, with some blue and red highlights indicating specific error messages or file paths. The terminal has a standard Mac OS X interface with a title bar at the top.

Output:**Explanation:**

Using GitHub Copilot, a responsive product catalog was generated with products displayed in a grid layout. The JavaScript “Add to Cart” feature successfully updated the cart counter and provided visual feedback when items were added. This improved user interaction and demonstrated basic e-commerce functionality in a simple and effective way.

Task 5: Create a Responsive Web Page Layout**Instructions:**

- Design a basic web page layout with a **header, main content area, and footer** using HTML and CSS.
- Use AI to assist in generating **responsive CSS** for different screen sizes.
- Ensure the layout is clean and visually organized.

Expected Output:

- A responsive web page with:
 - Header with navigation links
 - Main section with placeholder text/images
 - Footer with copyright or contact info
- Layout adapts correctly to desktop, tablet, and mobile screen sizes.

Prompt:

Generate a responsive web page layout with header, navigation, main content, and footer using HTML and CSS. Use Flexbox/Grid and media queries to support desktop, tablet, and mobile screens. Provide index.html and style.css.

Code:

Output:

The screenshot shows a web browser window with the URL 127.0.0.1:5500/lab_assignment_14.html#link2. The page has a dark blue header with the title "Responsive Web Layout". Below the header is a dark grey navigation bar with links for Home, About, Services, Portfolio, and Contact. The main content area contains a sidebar with "Quick Links" (Link 1, Link 2, Link 3, Link 4) and six cards arranged in two rows of three. Card 1: "Card 1" - This is a responsive card layout using CSS Grid and Flexbox. It adapts to different screen sizes automatically. Card 2: "Card 2" - Responsive design ensures that your website looks great on all devices: desktops, tablets, and mobile phones. Card 3: "Card 3" - Media queries allow you to apply different CSS styles based on the screen size, providing optimal user experience. Card 4: "Card 4" - This layout is mobile-first and uses modern CSS techniques for better performance and flexibility. Card 5 and Card 6 are partially visible at the bottom.

Explanation:

Using AI assistance, a clean and responsive web page layout was generated with a header, main content area, and footer. The responsive CSS ensured the layout adapted properly to desktop, tablet, and mobile screen sizes. This improved readability, organization, and overall user experience across different devices.

Note: Report should be submitted as a word document for all tasks in a single document with prompts, comments & code explanation, and output and if required, screenshots.
